INTERVIEW OF:

SUSAN NOLAN

PRESENT: GARY ABE

PROCEEDINGS 1 MR. ABE: This is Gary Abe. This is an 2 interview with Susan Nolan. And it is at 11:10. Ιt is Saturday, 19th of February. And I have asked Susan if it was all right to tape this interview and she has given her permission. Susan, what I would like you to do first of all, is to state your name and your address? 9 MS. NOLAN: Okay. My name is Susan Nolan. 10 The address is (omitted). 11 12 MR. ABE: Susan, what I would like to do 13 this morning is just to, as part of this interview, 14 is generally just let you talk through this. What 15 we are interested in is if you can describe your day 16 on the USS Greenville from the time that you arrived 17 until the time that you departed. And basically 18 what we are looking for is, is like when you were 19 still at the harbor, activities while you still were 20 at the harbor, such as any briefings, introductions 21 that you received, the time you left the pier, and 22 activities that occurred while underway in the 23 harbor. And then activities in the control room 24 while you were underway, and just basically just 25

describe in your own words, what you observed and

1	what you heard. Okay.
2	MS. NOLAN: Okay.
3	MR. ABE: So, I will just turn it over to
4	you.
5	MS. NOLAN: Okay. Well, I guess the day
6	started, we went to Pearl Harbor to the gate. And
7	before you go into the gate, we have a little
8	parking area. We waited there for Rowena, who is
9	with the Admiral's office. She came along and she
10	is the one who escorted us down to the submarine.
11	We drove onto the base and they had parking reserved
12	right there next to the submarine for us.
13	After we got out of the cars, we had two
14	cars, the, Rowena introduced us to everybody, so we
15	got introduced to Scott Waddle, the Commander, to
16	the Admiral's Chief of staff, who is Bob, then to
17	some of the senior officers on the crew. I am not
18	sure about their titles, but Pheifer, and Cohen were
19	two of them. The other ones we didn't met until
20	later.
21	At that time, Scott Waddle talked to us and
22	he was from Texas, which a lot of our party was
23	from, you know, so, it was like, almost like an
24	instant bonding, you know, he was really a very
25	personable kind of man. And he has got that sort

of, a lot of these guys in the Navy, who are in

26

1	senior positions, have that sort of feeling about
2	that you could, I guess they are used to leading and
3	you could, they almost seem presidential in a way,
4	you know, like more presidential than the President.
5	
6	So, anyway, we talked with him for a while
7	and then we did get onboard. And went, at that time
8	we went downstairs and this is my best recollection.
9	The beginning of the trip is not as vivid to me as
10	the end. But, we did go down to the crews' mess
11	where we sort of went over what we were going to do
12	for the day.
13	MR. ABE: About what time was that?
14	MS. NOLAN: Okay. When Rowena came to the
15	gate, that was at about 7:10. We had said sometime
16	between 7:00 and 7:30 and so I think it was about
17	7:10 because it was a little bit after seven. So,
18	by the time we got to the submarine, actually got
19	onboard, it would have been probably getting onto
20	towards eight o'clock at that time.
21	MR. ABE: Okay.
22	MS. NOLAN: I think we put out around about
23	eight, to actually go out to sea. When we were, we
24	didn't even realize we were actually leaving the
25	dock because we were going through this little
26	briefing about, you know, they were welcoming us

onboard and pretty much saying, you know, we could talk to whoever we would like, to engage the crew, 2 that they, Scott said that we probably wouldn't be able to shut them up because they are so proud of the boat and what they do and they love to have people onboard. And they just made us feel so 6 welcome, you know, it was really nice. When we did start getting underway and we 8 were actually in Pearl Harbor, we were invited to 9 come up top and with the submarine it sort of sits 10 out of the water a little bit. 11 MR. ABE: Right. 12 MS. NOLAN: So, we were, we came out on top 13 and then we were able to stand along the top and as 14 we were leaving Pearl Harbor, we were up at the top. 15 And able to see people. We saw Scott's wife waving 16 goodbye, because we went in front of his house. 17 MR. ABE: When you are saying on top, you 18 mean on top of, I mean, everyone was on top? 19 MS. NOLAN: Yes. 20 MR. ABE: All the guests were on top. 21 MS. NOLAN: Yes. Yes. 22 MR. ABE: So, you were on top of the 23 structure, not necessarily the --24 MS. NOLAN: Yeah, like if you think of a 25

plane, the fuselage.

1	MR. ABE: Okay.
2	MS. NOLAN: Like that.
3	MR. ABE: Okay.
4	MS. NOLAN: That is what we were on top of,
5	not, it is called the conning tower.
6	MR. ABE: Right.
7	MS. NOLAN: We weren't up there until later.
8	MR. ABE: Okay.
9	MS. NOLAN: So, we were up there and it was,
10	it was really exciting at that point. You know, we
11	were on this big nuclear submarine, we were pulling
12	out to sea, and everybody had cell phones with them,
13	and I think everybody made a couple of calls, you
14	know, to say, guess where we are, you know, we are
15	on the submarine, we are just heading out. And the
16	mood of the group was great and the crew was, they
17	were, seemed in really good spirits, too. And it, it
18	was like an exciting adventure.
19	Then as we started to get towards the mouth
20	of Pearl Harbor, I am not, I mean, I wasn't checking
21	my watch, so I don't know what the time frame was.
22	Probably maybe about 8:20, between 8:15, 8:20,
23	something like that, I would guess, that we were
24	going out of Pearl Harbor. And as we started
25	getting towards the mouth of Pearl Harbor, it
26	started to get rougher and so we went down.

1	At that stage, we did go to the Command
2	room, because when we actually started to go down,
3	after we had gone through Pearl Harbor, Scott wanted
4	us to see everything and they had up these flat
5	screen monitors everywhere.
6	MR. ABE: Right.
7	MS. NOLAN: And we could see everything that
8	happened. And so, I was really interested because,
9	you know, they have the periscope up, so you could
10	see everything that was happening.
11	MR. ABE: So, you were submerged at this
12	time.
13	MS. NOLAN: No, we weren't submerged yet.
14	MR. ABE: Okay.
15	MS. NOLAN: But, we did watch it submerge,
16	which was really interesting to me.
17	MR. ABE: Okay.
18	MS. NOLAN: That, you know, we started going
19	down, down and I was really nervous about going on a
20	submarine. I had to be talked into it. And so,
21	did, well, at least two of the other women felt like
22	they really didn't want to go. And I actually
23	talked them into it because it meant so much to our
24	husbands that, you know, that this was the
25	opportunity of a lifetime. And, you know, this, the
26	strange is that, you know, the night before we are

having this conversation and Mickey was saying to one of the other women, you know, what are you worried about? What do you think is going to happen? And he goes, these submarines go out every day, every day, it is routine. And it sort of haunts me now, you know, that conversation, because I think we came very close to actually going down, too. That is my impression. But, anyway, we will get to that later. But, okay, where was I? 10 MR. ABE: You were talking about, before, 11 you were in the control. 12 MS. NOLAN: Yes, we are in the control room. 13 MR. ABE: But, before you do that, I want to 14 clarify something. Did, were you ever up on the 15 conning tower? 16 MS. NOLAN: Yes. 17 MR. ABE: Okay. 18 MS. NOLAN: But, not until later. 19 MR. ABE: Oh, okay. Okay. 20 MS. NOLAN: Anyway, so we were in the 21 control room and basically, you know, we started 22 going under, and you know, all of the crew was very 23 forthcoming with information, you know, watch this, 24

and like I said, they have the flat screen monitors

in a number of different places and you could see,

25

- you know, the periscopes up there. And it is above
- water and then watching it go down under the water
- was really interesting, because you see the waves
- going up against it at first, and then we went, we
- were down underneath. And I get kind of
- claustrophobia and I was really worried about that
- at first, that it is so huge, that there is, I mean,
- 8 you really didn't feel claustrophobia on it. It was
- no more so than if you are on a, on an airplane, you
- 10 know. It is the same thing.
- Anyway, after that we split into two
- groups. And each group went on a tour of the sub.
- MR. ABE: Okay.
- MS. NOLAN: And so, there was probably about
- six to eight people in each group. And because
- there were too many and I don't know if you have
- been on the sub.
- MR. ABE: Right, right, I have.
- MS. NOLAN: You have, okay. You know, it is
- 20 pretty close, you know.
- MR. ABE: Right.
- MS. NOLAN: And so, you couldn't possibly
- have 16 of us together. And even with, I guess it
- must have been eight and eight, even with that, it
- was still, you know, hard to all be around at the
- same time.

1	But, they took us all over the boat.
2	Showed us everything. We went, we saw how the
3	torpedoes were fired. You know, they said you could
4	go inside and sign your name down at the bottom.
5	They had a special pen, so that every time a torpedo
6	was fired it would be fired against your name.
7	They are saying that, you know, that producer,
8	James, no, I guess he is a director, James Cameron,
9	he did Titanic.
10	MR. ABE: Right.
11	MS. NOLAN: He had just been on it, too, and
12	so his name was down the end of one of the
13	torpedoes. So, they were really proud of that.
14	You know, we had the headphones on, because
15	we actually got to fire the torpedoes. We didn't
16	fire torpedoes, but, we got to pretend like we were
17	firing. And I got to go up on the conning tower. I
18	had put on a, sort of like this rope, I don't know
19	what you call it, hoist, I guess it.
20	MR. ABE: Right.
21	MS. NOLAN: Yes. And go up there and, I was
22	up there with John Hall and Scott Waddle and Helen
23	Cullen and, there was one more person. I forget, I
24	don't remember.
25	MR. ABE: That is all right.

26

MS. NOLAN: Anyway we stayed up there for a

- while and it was, it was really great. You know, you could actually, you know, it felt like "Hunt for Red 2 October". We are on top of that conning tower. you had to strap yourself in and like I said, the weather was pretty bad. It was, it was pretty choppy and at one time this huge wave came over and actually came right up and trenched us. And I mean, we are up pretty high, too. MR. ABE: Right. 9 MS. NOLAN: So, those waves were pretty big. 10 And after, I guess, about 10 minutes we 11 were up there, you know, everybody got a chance to 12 go up there, I think. 13 MR. ABE: Okay. 14 MS. NOLAN: The other place that I did spend 15 time in was the sonar room. 16 MR. ABE: Okay. 17 MS. NOLAN: And that was interesting because 18 they were showing me how it all worked and we were 19 tracking whales. We were surrounded by whales who 20 were just playing along the sub, which and it is not 21 like you can actually see the whales, but you can, 22 they showed me how, how you can differentiate it. 23
- MR. ABE: Okay.

24

It is all like lines.

MS. NOLAN: That come down. And they did

- tell me that the sonar equipment, like they have
- different kinds of equipment and the actual sonar
- is, they said '70s technology, whereas, now there is
- more '80s and '90s, you know, I think that was the
- oldest technology on the ship from what they were
- 6 telling me.
- 7 MR. ABE: Okay.
- 8 MS. NOLAN: We had, let's see, we had a
- great lunch. It was great. They served us in the
- wardroom. We had two groups that went into lunch
- and the lunch that I went to, it wasn't with Scott,
- it was with Lieutenant Pheifer, was there, and I
- cannot remember his name, McIntyre, I think it might
- 14 have been.
- MR. ABE: Okay.
- MS. NOLAN: But, he is the tallest guy on
- the ship. He is 6'6" and he has to bend his head
- 18 all the time.
- MR. ABE: Okay.
- MS. NOLAN: That is was also there. He was
- really, really nice. He was great.
- 22 And so we had, you know, a really nice
- lunch. I guess you want to go on to what happened
- with the, going with the control room.
- MR. ABE: Right. Let's go into the control
- 26 room.

1	MS. NOLAN: Okay. The control room, we all
2	went up there
3	MR. ABE: Before we do that, let me ask you
4	this. Or maybe the other thing is the, we can
5	probably go in the control room now, but I am
6	interested in like any maneuvers that they did,
7	which probably occurred once you got down in the
8	control room.
9	MS. NOLAN: Right. Right.
10	MR. ABE: Okay.
11	MS. NOLAN: Yes. They did, because they
12	were, actually I think we were running a little bit
13	late because, you know, we were, we did have two
14	seatings at the lunch, and you know, we were going
15	through that and they, it is not like, you know, a
16	little box lunch or anything like that, you know, I
17	think it was at least three courses, you know, they
18	really did a nice job.
19	So, once our group gets finished with
20	lunch, then we went up to the control room, and that
21	is when, you know, they wanted to show us what a
22	submarine could really do. And we did the, all
23	kinds of stuff. We went down to, if they tell me
24	something, they are not suppose to be classified
25	MR. ABE: I wouldn't think that they would
26	tell you something that is classified. And then it

- wouldn't be classified.
- MS. NOLAN: They said that we are not
- 3 suppose to tell anybody else.
- MR. ABE: Oh. Why don't we talk about that
- 5 afterwards?
- 6 MS. NOLAN: Okay. Okay.
- Well, let's just say we went down deep.
- 8 MR. ABE: Okay.
- MS. NOLAN: The thing I am talking about is
- 10 how deep we went.
- MR. ABE: Okay.
- MS. NOLAN: Okay. That is the thing that
- they said is not --
- MR. ABE: Okay.
- MS. NOLAN: Okay. So, we went down very
- deep. Earlier we had got these Styrofoam cups like,
- sort of like that, only, you know, the white ones
- that are a little bit smaller than that.
- MR. ABE: Sure.
- MS. NOLAN: Okay. And we had all written
- things on the cups and it was to see what happens,
- like what the pressure does to things when you are
- down very deep.
- MR. ABE: Okay.
- MS. NOLAN: And so, we put those in the
- outside torpedo doors, and later on they gave them

to us and they had shrunk. Tiny, but still with the writing on it that we had and everything. So, we did that. We went down, you know, 3 pretty as deep as the sub will go. And then we came back up. We did some maneuvers they called angles and dangles. 6 MR. ABE: Okay. 7 MS. NOLAN: Which is basically going in a ziq-zaq kind of thing. We did, they are showing us 9 like the different ways the sub can go, not only the 10 side to side angles and dangles, but also the 11 degrees that you could go up and down. 12 MR. ABE: Okay. 13 MS. NOLAN: And it is really amazing when 14 you think about it, because the power that that 15 submarine has, you know, it can go that quickly, 16 that kind of speed and then stop. You are pushing 17 all of that water out of the way with this huge 1.8 machine. I mean, it really was impressive. 19 MR. ABE: During this, during these 20 maneuvers where the crew members doing these 21 maneuvers and you and the other quests just 22 observing or did some people have, were, were 23 sitting in some of the seats? 24 MS. NOLAN: Yes, they were letting us. But, 25

it was more like, it was an illusion of really being

- in control. You know what I am mean? It was,
- nobody thought they were driving the submarine. It
- was, it was more that, you know, people were doing
- it and the crew was right there. I mean, there was
- no question that they were in control of it.
- MR. ABE: So, there were guests at the helm
- and the plane during that time or --
- 8 MS. NOLAN: Yeah, and calling out like the,
- you know, dive, and looking up through the periscope
- and they let us do a lot of that stuff. But, this
- is while we were all under water, too. This wasn't
- on top.
- MR. ABE: Did people rotate from, from going
- to periscope to, let's say the helm seat and the
- plane seat or --
- MS. NOLAN: You mean the same person?
- MR. ABE: Yes, I mean --
- MS. NOLAN: No, if --
- MR. ABE: Did they sort of rotate you
- 20 around?
- MS. NOLAN: No. They really broke it up,
- you know, they would say, you know, would you like
- to do this or who would like to do that? And it
- wasn't, you know, you moved from here to here to
- here.
- MR. ABE: Okay.

1	MS. NOLAN: It wasn't.
2	MR. ABE: What did you do?
3	MS. NOLAN: I was sitting in, well, I took a
4	turn at the sonar, and then I was sitting at the,
5	okay, they have three seats across the front and
6	then they had the one where the chicken switch is.
7	MR. ABE: Right.
8	MS. NOLAN: I was sitting right in front of
9	there, and I was, they hadn't even really explained
10	to me, this is when we first started doing it.
11	MR. ABE: Right.
12	MS. NOLAN: And John Hall, who is, he is a
13	friend, he, this is like what he had been looking
14	forward to for a year, you know, and I turned around
15	and I could see his face, and I could just see this
16	longing that he wanted to sit were I was sitting.
17	So, I said to him, "John, you know, you come over
18	here. You do this." And he is like, "Oh, no, no,
19	no." And I said, "Come on, I insist." Because I
20	just knew how much it meant to him. So, anyway, he
21	ended up sitting down there for a while. But
22	MR. ABE: Was that the left seat, the right
23	seat, or the middle seat?
24	MS. NOLAN: The left seat.
25	MR. ABE: The left seat.
26	MS. NOLAN: Yes.

1	MR. ABE: Okay.
2	MS. NOLAN: Me, personally, I really didn't,
3	I think most of the women thought let the boys do
4	it, you know, because
5	MR. ABE: Okay.
6	MS. NOLAN: It really is a male kind of
7	thing, you know, I mean, not that we didn't have a
8	great time, too.
9	MR. ABE: Right.
10	MS. NOLAN: And I am glad, well, I was glad
11	up until the end that I did go along, because I
12	really did have to be talked into it. Because to me
13	I thought, do I really want to do this, and
14	MR. ABE: Yes.
15	MS. NOLAN: But, anyway, that is what it was
16	like. It wasn't, it wasn't like people were
17	rotating and that they could have had control of one
18	thing and then they went on and had control of
19	something else that would affect that. It wasn't
20	like that at all.
21	MR. ABE: So, people were at the helm and
22	the plane. There were people at the periscope,
23	people at the sonar.
24	MS. NOLAN: Yes, but not, I mean, not,

especially the sonar. I mean, all you did was you

put on the headphones and you could hear the whales.

25

26

- And, you know, you had the guys all around you, you
- know, actually monitoring all the sonar.
- MR. ABE: Okay.
- MS. NOLAN: It wasn't like we were saying,
- 5 "there is a ship up there." It wasn't like that at
- 6 all.
- 7 MR. ABE: Okay. How would you describe
- the, I guess the supervision, the crew, let's say
- 9 like, when John Hall was in that left seat, for
- instance, or when you were there in the left seat?
- MS. NOLAN: I would say vigilant, vigilant.
- 12 Always, always there, over your shoulder. And not
- just one, two or three people, you know, it wasn't,
- like I said it was an illusion of doing it, it
- wasn't really doing it.
- MR. ABE: Okay.
- MS. NOLAN: It was more like, like, you
- know, when you are teaching the little kid to do
- something, and you are holding their hand, guiding
- it, that is what it was like. At no time was
- anybody going, you know, "Oh, I am driving the
- boat." It wasn't like that, or you know, people
- might say, here, press this switch, you know, and
- they would have their hand right there. That is
- what it was like.
- MR. ABE: What was the, if you can remember,

- basically, what were the activities of the CO and
- the duty officer during this time?
- MS. NOLAN: The duty officer is Pheifer?
- 4 MR. ABE: Okay.
- 5 MS. NOLAN: Is that who you are talking
- 6 about?
- 7 MR. ABE: Right.
- 8 MS. NOLAN: Pheifer. Pheifer seemed like
- he, he was mostly in the sonar room. Scott was, he
- was right, right there on, on -- Can I draw you a
- 11 little diagram?
- MR. ABE: Sure.
- MS. NOLAN: Okay. Okay. Basically, this
- is the control room and this is the sonar.
- MR. ABE: Okay.
- MS. NOLAN: Down here. Okay. Right here
- you had two flat screen monitors on the, I quess
- this is like the command station.
- MR. ABE: Right.
- MS. NOLAN: Okay. And then over here you
- have, that is the helmsman right there.
- MR. ABE: Right.
- MS. NOLAN: You had another seat here, and
- another seat here and I am not sure what the
- functions of these two are.
- MR. ABE: Okay.

- MS. NOLAN: There is one here that is the,
- like the chicken switch is.
- MR. ABE: Right.
- MS. NOLAN: That was to blow the ship to the
- top. Over this side, this is all the weapons, okay.
- 6 MR. ABE: Fire control. Is that the fire
- 7 control?
- 8 MS. NOLAN: Yeah.
- 9 MR. ABE: Okay.
- MS. NOLAN: And then back here they had like
- all the maps, where the guys were doing the
- 12 navigating.
- MR. ABE: Right.
- MS. NOLAN: Okay. Scott pretty much and,
- oh, the periscope, they had two periscopes.
- MR. ABE: Right.
- MS. NOLAN: Right here.
- MR. ABE: Okay.
- MS. NOLAN: Scott was right about here the
- whole time.
- MR. ABE: Okay. So, that was sort of on
- the left, left side of the first paragraph, first
- 23 periscope.
- MS. NOLAN: Right. Just around that or
- right in front and looking at actually the monitors,
- where he could see pretty much everything that was

- going on, because this side of the ship, this is
- when we were doing the last maneuver of the day.
- MR. ABE: Okay.
- MS. NOLAN: I was over here.
- 5 MR. ABE: Okay.
- 6 MS. NOLAN: Okay. And I was, there was,
- there was a crew member right here, and right here.
- 8 And I was standing next to them, so I could pretty
- much see, you know, all the stuff that was going on
- over here. And then the sonar room, most of the
- time they had this curtain that was closed over it.
- MR. ABE: Right.
- MS. NOLAN: But, a few times it was open and
- 14 I could see that, too.
- MR. ABE: Where were most of the guests at
- the time of the, right before the emergency blow?
- MS. NOLAN: All over the place.
- MR. ABE: Oh, okay.
- MS. NOLAN: They were, well, there was, do
- you want the name of the group?
- MR. ABE: If you can.
- MS. NOLAN: Jack Clary, Jack Clary was there
- driving it. Well, not, when I say driving, not
- driving it, he had two crew members with him, two.
- MR. ABE: Right.
- MS. NOLAN: That were right in, right in

- back of him, right here.
- MR. ABE: Okay.
- MS. NOLAN: Okay. So, he was actually
- sitting in the seat but he had two people right in
- back. I am sorry, I have got your pen.
- 6 MR. ABE: No, go ahead. Okay.
- MS. NOLAN: Okay. I can write it for you
- 8 here. So, that was Jack and then two crew members
- 9 right behind him.
- MR. ABE: Okay.
- MS. NOLAN: John Hall was over here.
- MR. ABE: Okay.
- MS. NOLAN: Okay. He also had a crew
- member right behind him, who I remember this really
- vividly, too, had, John had his hands up there, the
- crew member had his hands right over those. And it
- was, I mean, I quess in case something happened, he
- had a heart attack or something, I don't know, or,
- you know, just, I guess, it was to be cautious that,
- you know, he did exactly the right thing. But,
- there was a crew member right there.
- MR. ABE: Did the crew member ever take his
- hands off of John Hall's?
- MS. NOLAN: No.
- MR. ABE: Okay. Good, okay.
- MS. NOLAN: No, not at all. And then the

- same thing with Jack, and he had two, two right
- there.
- MR. ABE: Was there anyone in the middle
- seat or the left hand seat? Do you remember?
- MS. NOLAN: No.
- 6 MR. ABE: Okay. So these were crew
- 7 members.
- 8 MS. NOLAN: Yes, those were crew members.
- 9 MR. ABE: Crew.
- MS. NOLAN: And then the other people, I
- mean, everybody was sort of around. There is not a
- 12 lot of room there.
- MR. ABE: Right.
- MS. NOLAN: And I can tell you that my
- husband, Mickey, he was right here, he was right
- next to the door to the sonar room. Yeah, right
- there, so that is Mick. I am trying to think who
- was where, I think Helen was right around the
- periscope. So, I think Helen was right here,
- because she was, I think she gave, they were telling
- to her to do some kind of command, you know.
- MR. ABE: Okay.
- MS. NOLAN: And then her fiancée', Mike,
- would have been right there, too.
- MR. ABE: Okay.
- MS. NOLAN: Most the people were over to

- this side.
- MR. ABE: Okay.
- MS. NOLAN: Okay. I can't tell you exactly
- 4 where people were.
- 5 MR. ABE: That is fine.
- 6 MS. NOLAN: Yes. But, yeah, basically that
- is the position that we were in. And, you know, and
- then this is right before we did the thing to the
- top, but, before we actually did that, we did go up,
- and looked through the periscope. We came up to, I
- believe he said it was 30 feet, that we were
- submerged at, and like I said, I wouldn't bet my
- life on it.
- MR. ABE: Right.
- MS. NOLAN: But, that is my best
- recollection, that it was 30, it was 30 feet.
- MR. ABE: Okay.
- MS. NOLAN: Put up the periscope, and one of
- the crew members looked around, and looked twice.
- 20 And the interesting thing is that we could see
- everything, you know, the cameras are hooked up to
- the periscope. So, on all the monitors you could
- see, you could see what was up there. He took two,
- two turns and I was watching it really carefully,
- there was nothing there. Nothing. Scott came and
- said he wanted to take a look. He asked them to

- take, take it up two more feet. So we went up two,
- two more feet. I don't know what the starting point
- was, but I know it did go up two more feet. Also
- took two full rotations, and he did it very
- 5 carefully. I mean, I watched it all. I saw
- 6 everything. There was no ship.
- MR. ABE: You saw everything based upon the
- s flat screen.
- 9 MS. NOLAN: Yeah. Yeah. And that is what
- is so inexplicable about this whole thing, that from
- what I could see they did everything right. I can't
- explain what happened.
- MR. ABE: Was there water splashing on the
- periscope, on the screen, I guess?
- MS. NOLAN: Water splashing on it? You
- could see drops of water, but I don't know if it was
- from the splashing or it was just dripping, dripping
- 18 down.
- MR. ABE: Okay.
- MS. NOLAN: It was very choppy. There was,
- you could tell there was a lot of waves out there
- and it was kind of hazy.
- MR. ABE: Okay.
- MS. NOLAN: But, they didn't rush it, you
- know, they really did, they really did look -- I
- mean, you had all those people and the Commander,

- who all were looking at these screens, I mean,
- 2 nobody saw it.
- MR. ABE: Was there anyone in the sonar room
- right before the blow? I mean, you positioned
- 5 everyone, sort of --
- MS. NOLAN: Oh, no.
- 7 MR. ABE: No.
- 8 MS. NOLAN: Only crew was in there at that
- 9 time.
- MR. ABE: There were only crew.
- MS. NOLAN: Yes. Earlier we had been able
- to go in there.
- MR. ABE: Right.
- MS. NOLAN: But, not, not during the
- emergency blow.
- MR. ABE: Okay. So, all the guests were in
- the control room right prior, prior to the emergency
- 18 blow.
- MS. NOLAN: Yes.
- MR. ABE: Okay.
- MS. NOLAN: Yes, we were all in there.
- MR. ABE: So, let's go ahead and just talk
- about the emergency blow.
- MS. NOLAN: Okay. Okay. They basically
- said, you know, that this, it would almost be like
- when we were doing the different angles, and Scott

explained to us exactly what would happen during the emergency blow. He asked John, who I think, I think 2 he and John really hit it off. They are both from Texas, and John is what, I quess maybe you saw him on the TV, he did that interview. MR. ABE: Right. 6 MS. NOLAN: He is sort, he is very easy to get to know and he is, like I said, he was so interested, you know, I think anybody in charge of a 9 sub who had somebody that excited about being there, 10 you think would naturally gravitate, you know, they 11 would gravitate towards each other. So, he asked 12 him if he would like to do that. And Scott also 13 asked Jack if he would like to sit in the helm seat. 14 And he said, yes, he would love to do it. 15 through exactly what was going to happen, so the, 16 you know the angle of ascent and how, you know, the 17 rate we would be going. And, you know, John got 18 briefed on how to do this and how you had to count, 19 he was counting out loud, you know, and doing, I am 20 not exactly sure what he did, but it was pulling the 21 switches and it involved counting and pulling things 22 at a certain time. 23 MR. ABE: Okay. 24 MS. NOLAN: And like I said, the person, the 25

person had his hands right over his the whole time.

26

- So, we went down to 400 feet, and then just start, it wasn't a long time. You know, we went up there, 2 we looked around, and then we started doing it. wasn't very long. MR. ABE: When you say you went down to 400 5 feet and then you looked around, meaning? 6 MS. NOLAN: Oh, no, we looked around first. 7 MR. ABE: Okay. MS. NOLAN: Then we went down to 400 feet. 9 MR. ABE: Okay. 10 MS. NOLAN: And then we started. 11 MR. ABE: Do you, could you give me an 12 estimate of time that you, from the time that you 13 looked around, and then went down to 400 feet? 14 MS. NOLAN: It is really hard, it is really, 15 really hard to say. Maybe, I would say between 16 three and five minutes. 17 MR. ABE: Okay. 18 MS. NOLAN: That is my best guess. 19 MR. ABE: Okay. 20 MS. NOLAN: Between the time we were up top 21 and the time that we went back up again, three to 22 five minutes. 23 MR. ABE: Okay. 24
- really like a thrill, you know, it was, we were

25

MS. NOLAN: Going, going up it was, it was

1	going up at this really steep angle, it was 25
2	degree angle. Going so quickly. You know, I
3	couldn't believe how quickly it went. And we had
4	been warned, you know, as soon as he blew that air,
5	that it was a safety procedure, you know, in case
6	anything happened to the sub, this is what they did.
7	So, it was like, it was a drill that they do. We
8	were, I remember going, going up, we are going up
9	and it felt like we came out of the water, and we,
10	it felt like we were almost going to come down and
11	first of all, I heard this big bang, that sounded,
12	it was like a big boom. And I had no idea that was
13	normal. At that stage, I thought maybe that is the
14	sound that you make when you come out of the water.
15	MR. ABE: Okay.
16	MS. NOLAN: But, it sounded like it was
	Mb. Nollan. But, it sounded like it was
17	right above us, this big boom. And I was, from
17	
	right above us, this big boom. And I was, from
18	right above us, this big boom. And I was, from where I was, you know, I could look right at Scott
18 19	right above us, this big boom. And I was, from where I was, you know, I could look right at Scott and all of the, you know, all of the men around
18 19 20	right above us, this big boom. And I was, from where I was, you know, I could look right at Scott and all of the, you know, all of the men around here, and I could see this look, you know, almost
18 19 20 21	right above us, this big boom. And I was, from where I was, you know, I could look right at Scott and all of the, you know, all of the men around here, and I could see this look, you know, almost like shock on their faces. And nobody said anything
18 19 20 21 22	right above us, this big boom. And I was, from where I was, you know, I could look right at Scott and all of the, you know, all of the men around here, and I could see this look, you know, almost like shock on their faces. And nobody said anything at that point, but about two seconds after the big
18 19 20 21 22 23	right above us, this big boom. And I was, from where I was, you know, I could look right at Scott and all of the, you know, all of the men around here, and I could see this look, you know, almost like shock on their faces. And nobody said anything at that point, but about two seconds after the big bang, there was this shudder that went through the

- actually shudder like that. But, it was definitely,
- I saw John, John's interview on the Today's Show,
- too, and he made it sound like it was the same, it
- happened at the same time, it didn't. It was, the
- bang was first, and then there was this shudder,
- after about two seconds.
- 7 MR. ABE: Okay.
- 8 MS. NOLAN: There was definitely two, two
- distinct things. Later, of course, I realized that
- that shudder was the rudder going through the boat.
- 11 That was, that was what did it. After that
- happened, right away, after the shudder, Scott, he
- said, "What the hell was that?" The other, I can't
- remember, I don't know who it was, one of the crew
- members next to him said, "I have no idea, sir."
- And he, right away he took up the periscope and it
- was almost like, it was magnetic. He immediately
- focused on the boat. And you know, it is up on the
- screen, and so we saw it and it was -- He said, you
- know, we have hit EHIME MARU,
- 21 and --
- MR. ABE: He didn't know it was the EHIME
- 23 MARU?
- MS. NOLAN: Yes, he could focus right in on
- 25 it.
- MR. ABE: Oh, so, he saw the name.

1	MS. NOLAN: Yes.
2	MR. ABE: Okay. Good.
3	And we were all kind of in shock, because,
4	you know, we had no idea what was going on. I mean,
5	of course it was obvious that we had hit something.
6	The boat on the monitor, I had no idea how big it
7	was at that time. It didn't to me look like it was
8	that big. And at that stage, as soon as we got up
9	the periscope, you could already tell it was
10	starting, it was intact, but you could tell it was
11	low on the, on the water there.
12	The, oh, the other thing that did happen,
13	too, that as soon as that shudder did happen, Jack,
14	who was seated in the helm seat right here.
15	MR. ABE: Right.
16	MS. NOLAN: The two men behind him
17	immediately pushed him out of that seat.
18	MR. ABE: Okay.
19	MS. NOLAN: So, as soon as that happened, he
20	was gone and then right, right out here, this is
21	where the passageway is.
22	MR. ABE: Right.
23	MS. NOLAN: They pushed him out in there.
24	MR. ABE: Okay.
25	MS. NOLAN: Okay. So, he was out of there
26	right away and they were taking over. They put him

- out of the way, even though, all he was doing was holding the --2 So, at that point, Scott, Scott said that 3 he would please like his guests to go down to the crews' mess. 5 MR. ABE: Okay. 6 MS. NOLAN: Which we all did right away. 7 Nobody talked. We all just filed out of there. Everybody was very, you know, serious. Of course, 9 you know, we had all, we all saw it on the monitors. 10 So, we went out, went down this hallway here and 11 then around, there are some steps that go down to 12 the crews mess and I think the time frame on this, 13 by the time he put up the periscope from the time we 14 hit it, was probably 30 seconds. It wasn't very 15 long. 16 MR. ABE: So, what you are saying is from 17 the time that you, the accident occurred, the 18 collision, until putting up the periscope was about 19 30 seconds. 20 MS. NOLAN: Yes. 21 MR. ABE: Okay. 22 MS. NOLAN: It was right away. 23 I would say about another 30 seconds to 45
- seconds went by that we were in the control room and 25 actually saw that before he asked us to leave. So, 2.6

24

1	probably, and then we went, okay, then we went down
2	to the crews mess. That was maybe another 30 to 40
3	seconds to go down there. And we sat in the crews'
4	mess and I am sure that up here, they didn't realize
5	they still had on the video.
6	MR. ABE: Okay.
7	MS. NOLAN: But, they did and so we sat
8	there in the crews' mess watching it. And they had
9	the camera on it the whole time, and so we actually
10	watched it sink. Me and my husband, we were like at
11	the back. We were the last people out of the mess
12	when they asked to go down to the torpedo room. And
13	we, when we actually left, when I left it was a tiny
14	little bit above water. Mickey, who was right
15	behind me, he saw he actually saw the last part
16	going down. It wasn't very long. I would, I would
17	give it from three minutes, it would have gone.
18	MR. ABE: From the time of the accident, it
19	sunk in three minutes.
20	MS. NOLAN: It was very, very quickly. And
21	it went down as one piece. It didn't break up.
22	The reason that they asked us to get out of
23	the crews mess was, who came down, I can't remember
24	who came down, one of the officers came down, he
25	said, that, you know, we hit the boat, which we
26	already knew, and they needed to get us out of the

crews mess because they needed to turn it into a triage area, that the crews mess, I guess it 2 converts and they, they were scrambling, everybody They were scrambling around looking for there. rescue equipment, turning the crews mess into a triage. I mean, really, the look of shock on their faces was just amazing. They, this whole thing that they didn't care is so false. It was so false. They tried everything. The real problem that I think happened was 10 they couldn't communicate with the people. Just 11 from watching the video, I couldn't see anybody in 12 the water at all. But, I think that might have been 13 because we were probably too far to see that. 14 Because it seemed to me like from the 15 perspective that if that was a 180 foot boat, I 16 don't think I would have seen people in the water on 17 the screen. 1.8 MR. ABE: Okay. 19 MS. NOLAN: But, this is my interpretation 20 of it, is that the real problem was that they 21 couldn't communicate. Right away they had the 22

EXECUTIVE COURT REPORTERS, INC. (301) 565-0064

down to us, asking if anybody spoke Japanese because

at that stage the people were in the life rafts, and

divers, they called for the divers to come up top

immediately. Then some of the crew came rushing

23

24

25

they wanted to find out, you know, had everybody been accounted for, what was going on, and they 2 couldn't communicate, not one single person on those life rafts spoke any English. And none of the crew spoke any Japanese. 5 MR. ABE: Right. 6 MS. NOLAN: And that, I think that was the real problem. They asked if any of us spoke Japanese --9 (Change tape.) 10 MS. NOLAN: It is sort of a relief to talk 11 about it here. 12 MR. ABE: Yes, normally it is. I mean, 13 especially under these circumstances in which, I 14 mean, you have been waiting and you are being 15 hounded by the media and this is your opportunity to 16 get it all out and maybe get on with the rest of 17 your life. 18 MS. NOLAN: I hope so, I really do. 19 So, like I was saying the problem Okav. 20 was is that there was a total lack of communication 21 and I can see how the Japanese people in the boat 22 misinterpreted it that, you know, I can just imagine 23 having this huge submarine, that is gigantic, 24 looming over you, people up there, you know, talking 25

and you can't understand anything they are saying.

1	What, what Scott wanted to do, I think, what Scott
2	wanted to do was to communicate to them that it
3	wasn't safe to take them onboard the sub. And if
4	you had had seen the seas, you know, the waters
5	flapping over the boat. A submarine is not the best
6	thing to do a rescue in. And the Admiral CO, Bob
7	Brundhuber, he came down and he pretty much, he kept
8	briefing us on what was happening. And they
9	desperately wanted to communicate to these people
LO	that they had called the Coast Guard, the Coast
L1	Guard was coming. They were safer staying in their
L2	life rafts than, if you can imagine trying to haul
L3	them onto a slick submarine, get them down a hatch,
L 4	where they would have to go down the three stores on
L5	these little, you know, ladders, if I was them, I
L6	would rather have stayed in the life rafts, too.
L7	They were much safer there. But, we couldn't tell
L8	them that.
L9	MR. ABE: Okay. Who was up on top?
20	MS. NOLAN: I don't know for sure. All I
21	know is that what, I am assuming that it was Scott
22	Waddle, probably his senior officers, who we didn't
23	see really after that.
24	MR. ABE: Okay.
25	MS. NOLAN: The, and then Bob Brunhuber, who

was our escort.

1	MR. ABE: Right.
2	MS. NOLAN: But, who was also a, you know, a
3	senior person in the Navy, too. He just kept us
4	informed of what was going on.
5	MR. ABE: All this, all of the things, all
6	of these activities that you have been describing,
7	would they be on the loud speaker or the intercom?
8	MS. NOLAN: No.
9	MR. ABE: So, basically, you, when you were
10	in the ward room.
11	MS. NOLAN: No, we weren't in the ward
12	room. We were in the torpedo room.
13	MR. ABE: Torpedo room.
14	MS. NOLAN: And we knew, we knew bits and
15	pieces of what was going on between Bob coming down
16	there, because there is no monitors.
17	MR. ABE: Okay.
18	MS. NOLAN: In the torpedo room. So, we
19	didn't, we didn't see any of this at all. But,
20	between, you know, what we heard there from sailors
21	coming down, who were frantic, trying to get the
22	rescue equipment, you know, who said little bits and

EXECUTIVE COURT REPORTERS, INC. (301) 565-0064

pieces. There was one sailor who was, I don't know

his name. He wasn't, he wasn't a senior person. He

down there, too, talking to us. And you know, it is

was a black, black sailor. He spent time with us

23

24

25

26

- hard enough, because I have thought about this over and over, and about what they must have gone 2 through, but, that is, this is from putting together all these different things, that is what, you know, went on. It was really a communications problem, is what I understood. And from them coming down and asking us, you know, desperately, anybody speak any Japanese, you know. I think that was the main problem. 9 MR. ABE: Yes. 10 MS. NOLAN: And is that it, or do you want 11 to know what happened like later on? 12 MR. ABE: What I am also interested in is, 13 since you were in the torpedo room, you really 14 didn't hear any announcements or anything on the 15 intercom, about what was going on? 16 MS. NOLAN: No. They, they still had the 17 announcements down there. 18 MR. ABE: Okay. 19 MS. NOLAN: But, anything, the thing was, 20 anything that they announced to the crew, they told 21 us first. They would come in and tell us. I, well, 22 okay, I will go on. 23 Actually about, probably 30 to 40 minutes,
- 24 Actually about, probably 30 to 40 minutes 25 and after Bob had come down and told us, you know, 26 that they had called the Coast Guard, that the

people were much safer in the boats. They weren't going to try and get them on with the seas the way 2 they were. So, then the triage in the crews' mess became sort of a moot point. And they allowed us to go back up there to the crews' mess. So, we, we stayed up there for a while. The strange thing was is that the submarine is on this real tight schedule as far as watches and meals goes, so they have meals every six hours, no matter what. So, they were scheduled for this meal. And of course, we were in 10 the way, and everything. So, they said, well, you 11 know, do you feel like eating? Can you eat 12 something? And nobody really felt like eating, and 13 so, we were just kind of sitting there in the way of 14 the rest of the crew and everything. Because at 15 this point we had become a big liability to them. 16 mean, that is the last thing you wanted was a 17 situation like this with 16 people onboard, who had 18 nothing to do with it, and can't help out, really. 19 But, we were in the crews' mess when Scott 20 came down and he said that, this has to be about two 21 hours after the accident, he said that we were going 22 to stay out all night, and participate in search and 23 rescue. And so, he came, he came down and told us 24 all of this before he made the announcement to the 25 This got, I was sitting right across from crew. 26

1	Helen, and immediately she started crying. Because
2	she couldn't see why we had to stay out there all
3	night. And I got really upset, too, because I
4	thought about it, and I thought, you know, you are a
5	few miles away from Pearl Harbor, you have got a
6	damaged nuclear submarine with a bunch of civilians
7	onboard, and you have got hundreds of ships at Pearl
8	Harbor. I couldn't see any reason except that we
9	were nuclear, like we were radioactive. I thought
10	something had happened to us, that, that was my
11	first thought, was that something has happened to
12	the nuclear reactor. And I got really upset, too.
13	And I mean, I should have thought about it more and
14	I should have thought they had to stay there just so
15	that it looked like, you know, even if you are
16	sending other ships out, the fact that, you know,
17	how does it look to the Japanese people, but, at
18	that stage, my mind wasn't there. All I thought
19	about is, you know, something has happened to us. I
20	thought, I thought for sure that the ship was not
21	safe to go back into port.
22	And so, this is probably more detailed than
23	you need, isn't it?
24	MR. ABE: No, go ahead.
25	MS. NOLAN: Well, this is just my
26	impression, you know, this is nothing factual. This

_	is instructions through my bond
1	is just what went through my head.
2	You have a big crew in here.
3	MR. ABE: They need to be in here now.
4	MS. NOLAN: Oh.
5	MR. ABE: It is part of our
6	MS. NOLAN: Oh, okay.
7	So, anyway then my husband, he had to go
8	and talk to, he went and talked to Bob, and told him
9	our concerns, and then, who was it, I can't remember
10	if it was Scott or Bob that came and said that, no,
11	we are not radioactive and you know, that basically
12	we are doing a search and rescue. And, you know,
13	then I felt, I felt horrible, because I felt like, I
14	mean, here is this horrible accident, and I felt
15	like a big crybaby. So, you know, I shut up. I
16	think all I wanted to know is that the nuclear
17	reactor hadn't been, hadn't been leaking or
18	anything. And as soon as that, then I thought about
19	it, and I thought, you know, why.
20	MR. ABE: That is understandable.
21	MS. NOLAN: And like I said, we, you know,
22	at first, we had no idea it was going to be a big
23	event or anything like that. We knew it was serious
24	and we knew that we had hit a boat. We had no idea
25	how big the boat was, or anything like that. And
26	they found out pretty quickly that it was a fishing

1	boat, and then they started, probably after about
2	two hours, they said it was picked up by CNN, that
3	is when we all started, you know, worrying about it
4	a little bit more, I think, about who would be
5	worried about us. And especially staying out all
6	night. We were thinking if somebody did see it on
7	the news, and then they tried calling, you know, and
8	the rest of them were staying at the hotel and so
9	they were thinking, you know, everybody is going to
L 0	be gone from the hotel. So, they did take, they did
L1	take names of, you know, people and tried to contact
L2	them, the Navy did that.
L3	MR. ABE: So, let's talk about on your way
L4	back now. When did you, do you remember about when
L5	you departed the scene and headed by to Honolulu?
L6	MS. NOLAN: Yes. We were supposed to come
L7	back into port at 7:00 a.m. It was actually about
L8	nine. First of all they said seven, and then they
L9	said nine thirty and it was actually nine when we
20	got back. We came in just, just inside Pearl
21	Harbor. They took us to a place where, they had all
22	the media contained really on, it was right in front
23	of Scott Waddle's house, this little point. But,
24	so, they off loaded us onto this tugboat and at that
25	stage, I think that is when the other, well, these
26	other men came aboard, who, they didn't seem

1	particularly nice. They were, I think they took
2	over the boat at that point, as we were off loading.
3	And so, we were put onto the tugboat. We were
4	taken back and I remember that going by those media,
5	then, because at that point we, we really didn't
6	still have any idea. They kind of looked at us, and
7	they are looking for the sub. So, they are like,
8	oh, you know, this is nobody. But, a couple of
9	people took our picture. And those are the ones
10	that have been all over the place, trying to figure
11	who we were.
12	We went, we came back into port. Went into
13	a debriefing with Admiral Konetzni Dave Warner was
14	there. It was, it was very emotional, the
15	debriefing. The Admiral cried. He was such a nice
16	man, you know, and he really, really feels for
17	everyone on this, you know.
18	MR. ABE: What was discussed in the
19	debriefing? What did the debriefing consist of?
20	MS. NOLAN: Pretty much to say what had
21	happened, who we had hit, that there were nine
22	people missing. At that point we pretty much, I
23	mean, you are right that as a group I think we are
24	all pretty united, we said to them, you know, that
25	we will help out in whatever way we can. You know,
) C	whatever we could do for them we would but we

really rather keep our names out of this. We didn't want, you know, any kind of attention. But, you 2 know, whatever we could do to help the Navy or the crew or the families or whatever, you know, that is what we would do. And the Admiral said, you know, that he guaranteed that our names would remain private. And he said that, what did he say? I am not sure. I can't say that for a fact. I want to say that he said that, you know, that it wouldn't 9 come out, but I don't, I can't say he said that. 10 That is the impression of it. You know, it is, we 11 were a non-factor and that is what we thought. 12 At that stage everybody was pretty shaken 13 They packed everybody up, you know, and then 14 just left. And, you know, later that day, the whole 15 group was suppose to have a tour of the Missouri and 16 the strange thing was, I think, is that nobody 17 really felt like going, but most of them did 18 because, I think, they just wanted to stick 19 together. 20 It is a strange experience. Totally 21 strange. 22 MR. ABE: Let me ask you, can you just, 23 during, during, right after the accident, in the 24 control room, how would you describe the activity? 25

Would you describe it, I mean, like lots, lots of

2.6

1	things going on, and everybody was probably loud and
2	noisy, and running around? Like was it, was that
3	sort of what was going on and it was hot, cold?
4	MS. NOLAN: Hot or cold? No, well, the
5	submarine is pretty chilly. It is not, because they
6	all wear long sleeves. They have those kind of
7	coverall uniforms.
8	MR. ABE: Right.
9	MS. NOLAN: So, they keep it kind of cool or
10	the sub. So, it wasn't hot. It was, it wasn't
11	really that, like a frantic kind of thing. It was
12	more, I think people were generally in shock. I
13	mean, none of us could believe that something like
14	this happened. And I mean, as far as I can see,
15	they did every single thing by the book. They
16	didn't rush it. They took their time. They, I
17	mean, to the point of probably going slower than
18	normal, because they are explaining everything as
19	they went along. And you know, how, how it happens
20	is such a mystery to me. I can't explain it. I
21	really can't. And all I can tell you is that it is,
22	from what I saw, it wasn't through negligence. It
23	wasn't through carelessness. It is just, it is
24	almost like fate. And I know, please don't put that

MR. ABE: One final question. The 26

24

in your report, but I just, I can't explain it.

involvement of alcohol, do you know if anyone, was alcohol served on the sub? MS. NOLAN: No, it wasn't. 3 MR. ABE: Not during lunch or --MS. NOLAN: No. 5 MR. ABE: Do you know if anyone carried on 6 any alcohol? MS. NOLAN: No. 8 MR. ABE: There were any --9 MS. NOLAN: Absolutely not. 10 MR. ABE: Okay. Do you know if anyone had 11 drank any alcohol before boarding the sub? 12 MS. NOLAN: We boarded at 7:00 a.m. No, 13 nobody had drank any alcohol. 14 MR. ABE: No. Okav. 15 MS. NOLAN: There was, there was absolutely 16 no, no doubt in my mind everybody was sober aboard 17 that boat. We even, that night after it happened 1.8 and they turned over the wardroom to us, and you 19 know, basically, like I said, we were in the way at 20 that point. They couldn't have been more 21 accommodating to us, though. They gave us the 22 wardroom. They assigned officers, well, not an 23 officer, McIntyre, I think that is his name, 24 McIntyre, the tall one, he is so nice. He was like 25

whatever we wanted, he would take care of. And we

2.6

basically, you know, had to fill in the time, and so some people were playing cards, and others were, 2 they had movies, you know, first release movies. They put on Erin Brockavitch. Some of the, what is it called, some football one. I can't remember. And then the bottom floor, they turned over to us, you know, when it was time to go to sleep, that, which was I know a huge inconvenience because it is not like these men have their own bunks. They have to rotate and to turn over the bottom level and that 10 to us, was major. But, you know, they pretty much, 11 they did everything they could to help us out. 12 But, anyway the point of all of that was 13 when we were in the wardroom, we were sitting there, 14 you know, somebody said, God, "I could use a Mai Tai 15 right now", you know, and then we were all joking 16 about it. And there was no alcohol onboard. 17 mean, we joked about how, you know, who was --18 MR. ABE: Okay. I mean, I have completed 19 my questions. Is there anything else that you, you 20 know, want to say, that you wanted to add? 21 MS. NOLAN: The only thing, okay, I would 22 like to say one thing, is that I really feel that 23 this was a really unfortunate accident. And I 24 really stress accident, because there is, there is 25 no way that anybody saw this coming. And I mean, 26

- these guys are so professional and so dedicated.
- And genuinely upset by what had happened. I mean,
- they really were.
- MR. ABE: How would you describe the, I
- guess the mood, I guess, on the return back? After
- this search and rescue completed and the sub was on
- its way back to Honolulu? I mean, not only, I mean,
- 8 you sort of described your mood, but --
- 9 MS. NOLAN: Very sober.
- MR. ABE: The crew's.
- MS. NOLAN: Very sober. I think they all,
- they all realized that nothing was ever going to be
- the same with them. And Commander Waddle, he just,
- you know, I know he didn't sleep the whole night.
- He was up. He was, he took so much responsibility
- for his crew and, you know, and when we were up on
- the conning tower he was talking about how much it
- meant to him, you know, his ship and how the
- commanding officers at the time for the whole ship
- and how his guys, you know, like little things that
- he did, like he really likes cigars, and some of
- them had shown an interest in it, because he did --
- Everything he said, even the announcements he made
- after it happened, you know, that for everybody to
- take their time, to listen, you know, to remember
- exactly what happened, not to, not to, you know, let

- too much time go by before they wrote down exactly
- what happened, to tell the truth, and it was all
- about integrity, you know. He was just really good.
- 4 He was very good.
- 5 MR. ABE: Okay. Thank you, Susan. It is
- about 12:20. I thank you for your time.
- MS. NOLAN: You are welcome.
- 8 (Whereupon, at 12:20 p.m., the interview
- 9 was concluded.)
